FINGERS & TOES

Jinky nails and beauty are proud to specialise in the application of bio sculpture, the first everlasting gel polish to come onto the market.

The benefits of this product are amazing, you will have no fear of damage to your nails; the product encourages your natural nails to grow, which is perfect for any nail biters who want to beat their addiction! Some systems that are designed to add length and strength require a certain amount of preparation to be carried out in order to ensure the product binds to the natural nail without any lifting, breaking or peeling. This includes filing down the natural nails surface, buffing and applying primers and bonders.

All of this causes trauma and dehydration to the nail plate.

When the product is removed the damage is apparent, with bio sculpture this is not the case. We do not use electric drills, nor do we file the natural nail plate or use bonders, or primers. Your nails will be in as perfect a condition as they were, when the bio sculpture was applied.

The original everlasting manicure, application is quick and easy. Bio sculpture gel is simply applied to the natural nail and cured under uv light to give it that strong, flexible and glossy finish.

Durable, flexible & no more chipping; long wearing and chip-proof, your bio sculpture gel treated nails keep their well-manicured look long after application, and will last up to 3-4 weeks.

Clients need not worry about breakages, as bio sculpture gel can also be used to extend and repair nails.
